## **EXHIBIT E**

Mr. C. E. Lavezzoli Executive Vice-President

Ordinary Life Insurance -- Proposed 1988 U.S. Dividend Scales

This memorandum covers an important element of the pricing of our Ordinary limited Ctates business -- namely the apportionment of directors for 1988 on

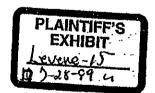

It is a central objective of our pricing system to provide our participating policyholders with insurance coverage at a price as near as practical to actual cost. This means that, after providing for an appropriate level of line of business are distributed equitably mong the Ordinary Life insurance policies so that each class is self-supporting and receives a dividend

The 1986 dividend scaler for U.S. Didinary Life insurance policies represented a major dividend scale revision. The resulted in increase of over \$130 million, the 1 yest increase in metropolitation increase of over \$130 of life insurance products included a function improvement in illustrated dividends fin new business which reflected in improvement in illustrated increase dividends on per inforce business by \$50 million expense management our new our new our per inforce business by \$50 million and would improve when the change to the 1987 illustrated dividends was presented to the sound when the change to the 1987 illustrated dividends was presented to the sound increase the change to the 1987 illustrated dividends was presented to the sound increase of the sound increase of the last the sound increase of over \$130 or \$1

When the change of the 1987 illustrated dividends was presented to the Board Directors last December, we indicated that it was our intention to Board meeting to the extent that we experience expense improvements which

# Initial View of the 1988 Dividend Scales

If we simply followed our traditional approach to the dividend scales, a decrease of \$100 million would be indicated for 1988 due to lower investment income. However, there is nothing in the underlying financial experience of the U.S. Ordinary Life business which indicates that this action is truly competitive position. Given this apparent conflict, it became clear that we should consider altering our traditional origing techniques. should consider altering our traditional pricing techniques.

## The Underlying Financial Experience

Our review of the underlying experience factors indicates first that mortality experience has continued at about the same level as in the recent/pact. With over the warr 1997-RG (c achievable but if we warr to respect to expenses, we believe that our three-year expense management plan over the warr 1997-RG (c achievable but if we warr to refer to the column t respect to expenses, we believe that our three-year expense management plan over the years 1987-89 is achievable, but if we were to reflect only the actual progress to date, then payable dividends on inforce business would be mentioned above). And finally, while statutory investment intended has declined this year (which by itself would generate a \$105-million decrease) has declined dividends), the underlying strength of the Ordinary Life assets suggests appropriate at this time.

The Depressing Current Effect of Deferred Income Acs

Over the past six years. Ordinary Life has increased significantly its investment in deferred income assets (i.e. those assets such as real estate which have low or even negative early statutor returns, but which are expected to yield a high average annualized eturn over the longer run) from 1986. While the long-term value of these investments is and \$5.4 billion in particularly after taxe, the current Ordinary Life portfolio earnings rate

As displayed a Exhibit the precipitors mowth in deferred income assets than 22. This 22 corresponds to precipitors mowth in deferred income assets than 22. This 22 corresponds a reduction in the Ordinary Life portfolio earnings rate of more million pex year.

whilit superizes the historical competitive analyses published by Best's over the last four years and shows that our ranking has consistently been at the very bottom of the 65 companies analyzed. While there are several factors affecting the historical rankings, it is instructive to note that if our 1986 ranking would have improved 20 places to a level between John Hancock and 1986 ranking would have improved 20 places to a level between John Hancock and Kew York Life but still 7 places behind Prudential.

# Alternative Strategies to Address Deferred Income Assets

The central issue which we face in order to improve our competitive position is the current treatment of deferred income assets. Prudential, Equitable, MONY, Northwestern Mutual and many other companies reflect the increasing value of these investments in their current dividend scales while we do not. value of these investments in their current dividend scales while we do not. Possible approaches to this issue include the following:

- 3 .

### Ignore depreciation.

Statutory and GAAP earnings are conservative in that real estate investments are depreciated while market values are appreciating investments are depreciated while market values are appreciating?

The inclusion of this depreciation as if it were negative cash investment income, while tax-efficient, produces appreciation in our pricing, an additional list multion would be available for distribution to our policyholders. The dividends (after netting out the \$105 decrease in investment income noted above).

# Partial inclusion of unrealized capital gains.

Starting this year, Canadian companies reviect in their financial statements no depreciation and add a markup equal to 10% of the excess of market value over book value. Ince the U.S. Ordinary Life deferred income assets have substantial unrealized capital gains 1250 million increase in earnings (\$140 million by companies adepreciation and another 110 million from the 104 markup). Increase in divinends.

# Reflect current value of the inderlying

Instead of distribution to current in the to their policyholders on distribute a targeter annual refund which is expected to be earned extended annual return which is expected to be earned to be earne

## Alternative 1988 Dividend Scales

Given the underlying financial strength of our U.S. Ordinary Life business, we are led to discard the approach which would reduce dividends by \$100 million. Viable alternatives cover a range of possibilities, depending upon our view of

A continuation of the current scale would be entirely justified since nothing in the underlying financial experience indicates that a

Notice:"Production and Use Sul Orders in MDL No. 1091. United Steam Dies Ca.

Various increases in dividend scales could each be justified in a

\$40 million -- reflect actual expense progress to date (\$5 million) and ignore depreciation (\$35 million).

\$100 million -- reflect actual expense progress to date (\$5 million) and reflect a 4% turrent return on real column distribution (\$95 million).

\$145 million -- reflect the full expense may be ment plan (\$50 million) and reflect a 4% current return on real est estat

### Cash Flow and Accounting

Since an increase in dividend scales generates to cash outflow and in fact Since an increase in dividend scales generates no cash outriow and in fact increases our assets slightly, all of the above options can be supported without changing existing plans to sell or to retain specific assets. In impact that a change in dividend scales would have on our earnings.

- 70% of our dividends remain with detropolitan as hightional Insurance or Dividends with interest, and the bined effect of the gains and surplus and generates with credit of 36%. Therefore our assets actually increase of dividends paid,
- Kew ork state regulations allow carrain modifications to the accounting treatment of real estable. For example, the "Constant For example, the "Constant would increase our earning by 1140 million. Another alternative could crease our statutory gain by charging joint venture-losses as a third alternative could increase statutory surplus by charging these current losses to the Mortgage Loan and Real Estate these current losses to the Mortgage Loan and Real Estate
- To the extent that the investment climate permits, we could extend our plans to realize real estate capital gains gradually over the next several years. While statutory gains would not be altered, GAAP income and statutory surplus would be increased.

The important point to note here is that cash flow and earnings need not necessarily influence our dividend scale decision for 1988 as long as we had that the true underlying flowerial through of this hardons can believe that the true underlying financial strength of this business can support the dividends. Both the investment decisions and the accounting decisions can be made independently based on their own merits.

## Projected Earnings for 1987 and 1988

Exhibit 3 displays projected earnings and surplus under the dividend scale options described above, assuming no change in accounting methods and that na additional capital gains are realized between now and the end of 1988.

As we move forward with any one of these alternatives, it will be As we move forward with any one of these alternatives, it will be important to understand and report to senfor management the continued impact as our dividend, accounting, and investment decisions. As a the case when we implemented our expense management plan, a critical step will be to stablish contain the risks so that we don't overextend our actions in relations and to underlying strength of this business (one measure of which is the unrealized capital gains which currently stand at \$1. billion).

We believe that any of the proposed alternative 1888 dividend codes for Personal Life Insurance policies are fair and equitable to expect class of projected earnings -- particularly when the impact of despreed income assets

These possible 1988 divided states are preliminal in that they are based on our current profession of earnings for 1987 that they are based on be presented at the October board meeting of the basis of then-projected lines of personal insurance issued in the basis of then-projected will be based on the basis of the projected in the basis of the projected in the basis of the projected will be basis of the projected in the basis of the basi
